

# The perfect solution for dark circles under the eye

Tried everything, but nothing works? New *Eyerix* by *PharmaClinix* is the answer!

The skin around the eyes is very delicate, thin and susceptible to damage. It's also among the first places we see changes in our appearance, because of its thinness. Before you buy an eye cream, you need to take into consideration what problems you need to address.

Whether you have baggy eyes, puffy eyes, fine lines or dark circles, the many eye creams in shops serve different purposes; they specifically combat the environmental conditions that cause our various eye problems.

*PharmaClinix's Eyerix* has been developed after extensive research in a Patent Pending formula, specifically designed for this sensitive area to reduce the symptoms and unsightly appearance of hyperpigmentation and wrinkles.

*Eyerix* contains extracts of Kojic Dipalmitate Glycyrrhiza Glabra (Licorice Root), Bearberry-leaf and Mitracarpus Scaber.

## **This powerful combination of ingredients has many benefits:**

**It multiplies the production of collagen** (a skin protein) and promotes the elastic properties, improving the skin smoothness and elasticity and slowing down the wrinkling process.

**It suppresses inflammatory enzymes** decreasing puffiness, swelling and signs of fatigue.

**It strengthens** capillaries, arteries and veins, reducing leakage and colour lines.

**It obstructs histamine formation** reducing any allergic reactions.

*Eyerix* should be applied twice daily, before moisturising. The visible effects are stunning; brightening the whole area around your eyes — the windows to the soul!

*PharmaClinix* is the brand leader for skin lightening, dark under-eye circle, anti-aging and hyper-pigmentation treatments, wrinkle creams and acne scarring. It is especially formulated for Asian and Arabic skin.

This luxury range of cosmeceuticals does not contain any animal products and is clinically tested, licensed and produced in the EU, by the award winning chemist, Shashi Gossain, (Member of the Royal Pharmaceutical Society, GB and Member of the Society of Cosmetic Scientists, GB)
